PROTECTIVE CANOPIES

*A 3.5 Hectare dam – from below- showing the large spans now achievable.*

Water Storage areas in the Granite Belt face the challenge of high evaporation rates, as do many other areas of Australia. A number of storages are now incorporating suspended, long-life protective canopies - primarily to reduce evaporation, but also to improve water quality.

NetPro Pty Ltd has completed three years of development and now offers a practical and cost effective resolution to these challenges.
